ARK Story

As is known, "ARK" comes from the biblical story of Noah's Ark.

More *Persistent* >>

Noah saved his family and birds and animals on earth by constructing an Ark to combat with the catastrophic flood that God produced to destroy all evil on earth. The Ark Noah created withheld the flood for 115 days and nights and finally succeeded. Later on a brand new civilization was also formed. The story deep in the heart of ARKers as our corporate culture, we have dedicated ARK to making the most robust modular building structure while helping those in need through humanitarian and disaster relief efforts in recognition of Noah's Ark.

Based on this story, brand name ARK was created, aimed to provide one-stop space & modular building solutions to the customers, including providing necessary accessory parts related to the prefab housing.

"Rescue your time" is the core in our activities of providing modular and space solutions to the customers. ARK is not only to supply the modular cabins to accommodate any projects, but also to save the project duration time which would benefit both sides. It's embodied in our EFFECTIVE supplying services and FLEXIBLE modular options.

Currently Ark Prefab is one of the global leading suppliers of prefabricated modular buildings with more than a decade experience and knowledge in designing and constructing modular building camps, and innovative solutions for disaster relief, oil & gas / mining sectors, hotels, hospitals, schools and colleges, bars, restaurants and retail buildings.

ARKers

- » Sales Department with CRM System
- » Manufacturing Department with full Production lines
- » Purchasing Department with full Supplying System
- » Engineering Department with CAD & R&D Designers
- » Quality Control Department with Professional Managers
- » Project Department with Professional Workers

Under the principle of product innovation and customers' service excellence, each and every department members share the value of cooperating to be the best:

CAD designers always aspired to do reasonable and satisfying building drawing solutions for the sales to meet the customers' demands;

QC managers and R & D designers always working together to innovate and improve the products so as to perfect the space services provided;

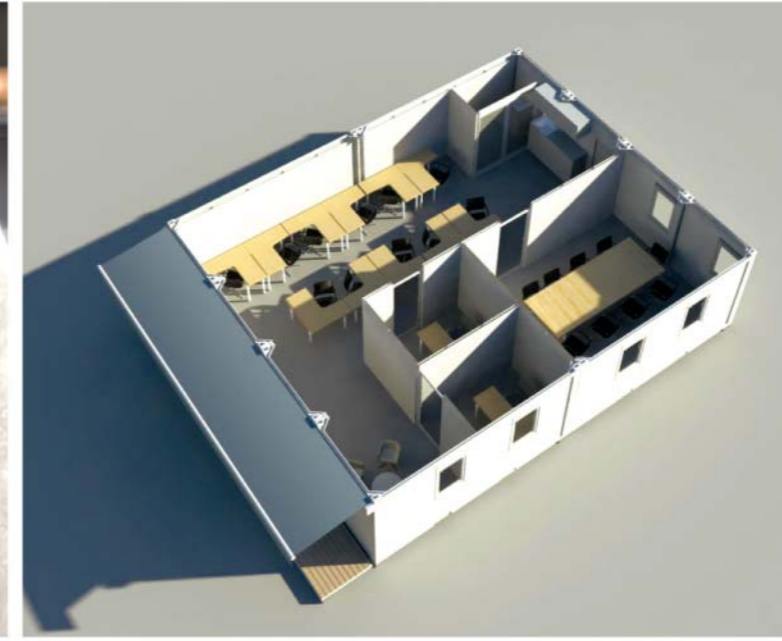

Purchasing engineers always active to find the most valued

& suitable accessories to diversify and utilize the products serving system;

Project Managers always come back to the Manufacturing Department, Engineering Department and the QC Department after site constructions and installations to improve ourselves.

All of the ARKers have been enjoying the things we've done. In 2011 Ark Annual Meeting 4 ARKers have been awarded for their exceptional contributions in the positions and their satisfying career attitudes.

More Passionate >>

Design & Engineering

Home to experienced team of designers, including skilled CAD designers and 3D designers, Ark is able to deliver freely satisfying designs for any constructing projects in accordance with different regional standards.

We can also do comparably complex structural engineering of modular building, which may be charged.

Our goal is to deliver exceptional & satisfying modular solutions for your projects.

Manufacturing

Home to over 200 full time factory workers and over 15,000sqm of factory under roof, ARK is able to produce at least 50 units per day and definitely deliver your units on time.

The ARK products are both CE and ABS(Australian Building Code) certified, and tested to have met other regional standards. Based on the ISO 9001 management system, our Quality Control (QC) staff together with R&D Managers are not only concentrating on the quality, but also dedicated to innovating 'sustainable' & energy-efficient modular buildings.

ARK standard flatpack unit is sized by 8' x 20', but 8' x 10', 8' x 16', 8' x 24' and 8' x 30' flatpacks are also available, including modified or special steel containers which can be functioned as explosion rooms, spray booths, chemical storage containers etc. Please feel free to contact us once you've got any requirements.

Varied Accessories Options

As the modular building system is closely tied to the housing decorations, it is essential to provide related accessories along with the modular cabins. With the professional purchasing team members, ARK is able to provide valued and suitable accessories options for the customers, such as electrics, plumbing gears, furnitures and so on with varied local and international quality and safety standards certificates.

Transportation Merits

ARK's factory is near the port of Shanghai, with flexible logistical options for products ex-factory. In addition, as situated in Shanghai, one of the biggest port in China, ARK's products are so convenient for transportation to places all over the world, from Africa, Middle East, South America, to North America, Europe, and Australia and so on.

Company Competence

Installation & Construction

As all our products-related projects are connected to Earthworks, Civil Works, Foundations, Modular Units Installations, Plumbing Works, Electrician Works and Carpentry Works, we have professional construction team consisted of plumbers, electricians and carpenters etc.

Our construction team are not only doing the works above, but also able to erect complex steel structured building. With the help of our professional installation team, any projects would become easier and more smooth.

Corporate DNA

Vision

To be the most innovative and sustainable modular building system supplier in the world focused on modular space solutions for customers who require such facilities to operate and grow their organizations. ARK strives to promote ease of doing business globally and regionally, to be recognized for its focus on customer service excellence.

ARK is also dedicated to product innovation and a reputation for exceptional commitment to customers service and effective management system of business operations.

Concept

- >> Professional
- >> Pioneering
- >> Persistent
- >> Passionate

All our visions are based on these four concepts, only in which way the realities could be reached.
